PROFILE

A Frontend Developer with a keen eye for detail and design. My approach is developing applications from both technical and user experience design perspectives. I enjoy analyzing situations to think about valuable and efficient project contributions and being a skilled communicator I always try to expand my professional connections.

Complementing my educational background in web development, I'm working towards my goal of becoming a frontend expert. I've worked on applications for large companies such as Capgemini Group, ABN AMRO and NN Group. I'm experienced in working on applications from a multidisciplinary approach including coding, testing, designing and communication.
